HY-LOOP hook-and-loop clamp

CFL

HY-LOOP bundles and fixes cables simply and economically

The system consists of endless hook-and-loop tape and various hook-and-loop tape bases developed for different types of mounting on profiles or rails. Once the base has been attached, the back-to-back hook-and-loop tape can be cut to the required length and attached without tools, automatically fixing it in the direction of pull. The hook-and-loop tape is exchangeable and reusable. As the fleece and hook are arranged on opposite sides, the hook-and-loop surface is as large as possible and provides a stable hold. Bundles of cables, wires and hoses of all kinds can be reassembled or extended again and again. If necessary, the hook-and-loop tape is simply opened, the bundle is reassembled and the tape is closed again.

Application

- Installation / attachment of various cables, lines and hoses in modern machines and plants

Product advantages

- Variable length of the hook-and-loop tape, or versions with hook-and-loop tape already installed
- Damage-free installation of sensitive cables
- Excellent fire protection properties (UL94)
- Tool-free cable assembly
- Extremely easy handling
- Cable bundles can be extended easily
- Reusable

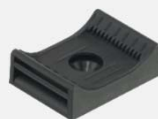

Customer benefits

- Reduced assembly time
- Reduction in material costs
- Increased work safety for the installation personnel

Technical specifications

- Clamping range

4 – 20 mm
8 – 35 mm
10 – 60 mm
20 – 100 mm
- Tape width 10/20/30 mm

- **Base for hook-and-loop tape**
